Internship Report

Project Title: Expense Tracker

Hosting Company: Digital Equb Financial Technology

Name of Student

ID Number

1. Abel Assefa.....1300419

Company Supervisor: Mr. Fasil Getie

Date, Ac. year: Oct 3, 2018 E.C

Woldia ,Ethiopia

Declaration

Internship program is one in which students go to different companies and develops their practical skill in coordination with their theoretical knowledge. It is obvious that internship help students to be creative, communicative, responsible, punctual and respectful. Woldia University permitted us to have a four-month field work in different companies and i have performed our internship field practice at Digital Equb Financial Technology.

During this training, I have learned and practiced numerous knowledge and skills on system development. Our internship practice was mainly focused on basic web development, mobile application development and software maintenance. In this document, I have started our report by introducing the objective, scope, problem of statement and their solution i found. After that, I would list the detailed information about what i have done and learn in this internship practice. For field practice explanation, I have used different figures for better explanation of what we have done and what i get from that field practice. Next, I would summarize our report at the conclusion part and finally i will finish our report by listing the source documents that i have used as a reference during the practice time.

The information of this report is our own original gathered authentic works. It also makes practical and effective fulfillment of the purpose and objective of this field attachment, and the content of the document has never been previously submitted to any other university or institute for a higher degree or any other award. Except for organization documentation, Reference to other people's work used where otherwise acknowledged.

_____ Name of the Academic Advisor	_____ Date	_____ Signature
_____ Name of student	_____ Date	_____ Signature
_____ Name of student	_____ Date	_____ Signature
_____ Name of student	_____ Date	_____ Signature

Acknowledgment

First and foremost, I would like to acknowledge the Almighty God for the successful completion of the internship or field attachment period. Beside to these, I would like to express special gratitude and thanks to Digital Equb Financial Technology Workers and our advisor Mr. Fasil Getie for giving us such advice, attention and time to accomplish our field practice. I would like to give deepest appreciation to those people who helped even in the smallest way in making the completion of this report. Generally, I would like to give our appreciation and special thanks to IT officials of the institution, who never failed to guide us and give important advice regarding our observation in software areas, to our institute for the financial support and encouragement, to our teachers for suggestions and sharing of valuable information.

Executive Summery

The goal of the internship is to increase the knowledge of students and familiarize them with the practical section and make a sociable person with the institution for preparing a solution for problems that existed in the institution. I have been working in Digital Equib Financial Technology for the last four-months. When i stayed in the institution on a practical attachment, I got tremendous experiences from that institution related to our field of study and gave our experience to the institution. I worked on DE Facility Management System project. This project enabled us to gain a good experience and learn practical skills. From the experience i got when i was in the institution, I had written this report based on what i have done and observe.

The analysis of the theory taught in classroom and its application in practice also showed in the internship paper. Our internship paper was mainly composed of four parts:

- Company background,
- Internship experience,
- Project work,
- General conclusion and recommendation

✓ The first part includes the history of the organization, organizational structure, work flow and its customers and end user of the service.

✓ The second part describing the overall benefits gained from the internship, including section of the company i have been working, which work piece i have been executing, major challenges and problems i have been facing and what measures i have taken (propose as a solution for the selected problems) in order to overcome these challenges and problems.

✓ The third part describing our project work and the highlight of project summary, problem of statement, methodology, objective and user interface of the project and scope of our project.

It included the declaration and acknowledgment, acronym and table of content.

✓ The fourth part was the description of our internship in Digital Equib Financial Technology. It includes general conclusion, recommendation, references and appendices.

Chapter One

Company Background

Brief History of Digital Equb Financial Technology

Digital Equb Financial Technology S.C. was established to modernize Ethiopia's long-standing traditional equb (rotating savings and credit association) system using technology. Through a working agreement with the Commercial Bank of Ethiopia (CBE), the company introduced a **fully digital equb platform** that allows members to make contributions and receive payouts via CBE's digital payment channels, including mobile banking and CBE Birr.

The service is delivered through the **Digital Equb mobile application**, available on both Android and iOS platforms. This innovation makes equb participation accessible, transparent, and convenient for individuals, associations, and organizations across Ethiopia.

Location

The head office of Digital Equb Financial Technology is located in **Addis Ababa, Ethiopia**, specifically around **Kazanchis, Bloom Tower, 4th Floor**. The company operates nationally through its digital platforms, serving users wherever they are.

Staff

Digital Equb employs a diverse team with backgrounds in **finance, technology, and management**. Staff expertise ranges from **software engineering, fintech innovation, and ICT infrastructure** to **customer service and compliance**. The team also includes specialists who previously worked on digital payment integration with financial institutions, ensuring the platform meets both technical and regulatory standards.

Vision and Mission

Mission

To modernize and digitize the traditional equb system by providing a secure, transparent, and user-friendly financial technology platform that empowers individuals, businesses, and communities to manage collective savings and achieve their financial goals.

Vision

To become Ethiopia's leading and most trusted **digital savings and credit platform**, recognized across the region as a pioneer in digitizing traditional financial systems.

Values and Principles

Innovation with Tradition – modernizing equb while respecting its cultural roots.

Transparency & Trust – ensuring fair, automated, and traceable transactions.

Financial Inclusion – enabling individuals, associations, and businesses to access structured savings.

Customer Focus – prioritizing user satisfaction and accessibility.

Integrity – operating with honesty and responsibility in all services.

Collaboration – partnering with banks, organizations, and communities for growth.

Services

Main Services

1. Digital Equb Types

Individual/Standard Equb – for workers, drivers, and traders to contribute daily, weekly, or monthly.

Association Equb – for community or social groups to create member-only equbs.

Institutional Equb – for organizations allowing employees to join through a company-managed system.

Commodity Equb – for members contributing toward goods instead of cash payouts.

2. Participation

Members can join by downloading the Digital Equb app:

Android: [Play Store](#)

iOS: [App Store](#)

3. Contributions & Draw System

Daily, weekly, or monthly contributions depending on equb type.

Automated lottery (draw) system ensures fairness.

Results are viewable live via the app.

4. Service Fees

Daily equb: **4.76%**

Monthly equb: **3%**

5. Payout & Guarantee

Winners must provide financial guarantees (e.g., salary slip, collateral, or guarantor) before payout.

Digital Equb assumes temporary responsibility if members default, then seeks legal repayment.

Additional Services

Mobile App Platform – Android & iOS.

Secure Payment Integration – via CBE Mobile Banking & CBE Birr.

Customer Support – in-app and office-based.

Training & Awareness – educating users on digital equb participation.

Stakeholders

Commercial Bank of Ethiopia (CBE) – strategic partner for payment integration.

Government organizations – for regulatory oversight and partnerships.

Non-government organizations – for community savings programs.

Enterprises & Cooperatives – for institutional equbs.

Individual Citizens – as direct participants.

Organizational Structure and Work-flow

Organizational Structure

Board of Directors

Chief Executive Officer (CEO)

Vice President for Administration & Finance

Vice President for Technology & Operations

Vice President for Marketing & Customer Service

Directorates: ICT, Finance, Human Resources, Research & Development, Customer Support, Compliance

Work-flow

1. Customers register via the mobile app.
2. Equb groups are created (individual, association, or institutional).
3. Members contribute digitally through CBE payment options.
4. The automated draw system selects winners.
5. Payouts are processed after guarantee verification.
6. Monitoring and reporting are done through the system dashboard.

ICT Directorate

Mission

The mission of the ICT Directorate of **Digital Equb Financial Technology** is to serve as the technological backbone of the company, enabling secure, innovative, and efficient digital financial services. The Directorate ensures that the equb system is powered by reliable ICT infrastructures, advanced automation, and cutting-edge fintech solutions that support the company's vision of modernizing traditional savings and credit practices.

Duties and Responsibilities

The ICT Directorate is responsible for developing, managing, and securing the information and communication technologies that sustain the company's operations and services. Its key duties include:

ICT Infrastructure and Services

Establish, enhance, and expand ICT infrastructures to support the growth of digital equb operations.

Ensure availability, scalability, and reliability of mobile and web platforms for customers.

System Development and Automation

Digitize and automate business processes including equb membership, contributions, draws, and payouts.

Continuously improve mobile and web applications to enhance user experience.

Cybersecurity and Data Protection

Maintain a secure and seamless digital environment by implementing advanced cybersecurity measures.

Protect customer data, financial transactions, and business information against risks.

Research and Innovation

Drive technology-driven innovation to introduce new fintech solutions and services.

Collaborate with internal and external stakeholders to implement modern technologies.

Capacity Building

Strengthen ICT human resource skills through continuous training and knowledge sharing.

Promote a culture of digital innovation within the organization.

Technical Support and Maintenance

Provide reliable ICT support and maintenance services for internal operations and customers.

Monitor and resolve technical issues promptly to ensure uninterrupted service delivery.

Chapter Two

Internship Experience

Objective of the internship

General objective of internship

To connect students with potential employers and provides opportunities to explore the variety of career objectives that are often available within in the hosting company.

Specific objective of the internship

- To create interrelation and interdependence to the internship company.
- Create conducive atmosphere to assess professional qualification.
- Means to transfer a knowledge and technology to the industry.
- Support the government directions to the ongoing industrial lead growth and transformation
- Student get opportunity to see the real problem of industry and when back to university they
- can find a solution for different challenges.

How we get in to the company?

As soon as i have received the request letter from our faculty head, I try to request some of the companies for internship and most of the companies say that there is no place for interns in their organization. Finally, I try to request again another organization that is DE. I have performed the agreement with the hosting organization how to precede the internship and what resources are required for the internship to practice. I have performed the formal way of application for the internship by showing the formal application form and the applicant letter from the Institute of Technology Woldia University (WIT) with the assigned sector office. This organization (DE) accepts our request paper. After I have taken holistic exam, I went to our hosting company (DE).

Why you select this company?

I selected **Digital Equib Financial Technology (DE)** for our internship program because its work activities are directly related to our field of study in software engineering and financial technology. DE is a company that develops **digital financial platforms**, provides ICT-based solutions, and automates business processes, making it a suitable place to gain both **technical** and **soft skills**.

In addition, DE provides **training opportunities** for employees and external stakeholders, enabling us to grow professionally. The practical exposure in system

development, database management, and digital financial solutions made DE an ideal choice for our internship.

Section of the company I have been working and why?

We joined the **ICT Directorate and Administration Core Process**, which is responsible for:

ICT infrastructures and services enhancement and expansion.

Digitizing and automating operational, financial, research, and administrative processes.

Provision of ICT technical support and maintenance services.

Driving ICT human capacity development and enabling business collaborations.

Database administration.

Monitoring and evaluation of ICT systems.

From these, I specifically joined the **Software Development and Administration Department**. The department works on:

Database design and management.

Website development and administration.

System and software development.

Providing ICT training for end-users.

I selected this department because I'm most interested in **system/software development**, and it provided us with the opportunity to apply our knowledge in building real-world projects.

Work piece or work tasks I have been executing

During our internship, I executed various tasks in line with **system development**. The main activities included:

Requirement Gathering – Collected system requirements from employees through interviews, observation, and workflow analysis.

Requirement Analysis – Analyzed gathered information to define functional and non-functional requirements.

Requirement Specification – Documented system requirements for design and development reference.

Requirement Validation – Cross-checked requirements with stakeholders for alignment.

Proposal Writing – Prepared project proposal outlining objectives, features, and expected outcomes.

Software Design – Created system architecture and UI wireframes using UML diagrams.

Implementation – Developed modules using modern technologies.

Software Validation – Verified modules against requirements.

Testing – Conducted unit and integration testing.

System development tools and techniques

Programming Languages (MERN Stack)

Frontend (Client-side): React.js, Tailwind CSS, JavaScript.

Backend (Server-side): Node.js, Express.js.

Database: MongoDB.

System Development Tools

Code Editors: Visual Studio Code.

Version Control: Git & GitHub.

API Testing: Postman.

Design Tools: Figma / Wireframes for UI mockups.

Other Tools: Excel for data export validation, npm packages for charts (Recharts, Chart.js).

Hardware Used

Laptop/Desktop computer.

Network connection for deployment and integration.

Flash storage for project backup.

Development Techniques

Agile / Incremental Development Methodology – Built features in increments such as authentication, income/expense modules, dashboard, and reporting. Each increment delivered usable functionality with stakeholder feedback.

Major challenges and problems faced

Since the Expense Tracker project was built with new technologies (MERN stack), faced several challenges:

At first, difficulty in **understanding JWT authentication** flow for secure login.

Lack of sufficient sample data during testing.

Challenges in **frontend-backend integration** with Axios.

Limited knowledge in generating and exporting **Excel reports**.

Managing **state across components** in React.js.

Setting up responsive design to fit both web and mobile screens.

Measures I have taken to overcome these challenges

I studied documentation and online tutorials about **JWT, MongoDB, and Axios**.

Used **dummy data** for initial testing before connecting APIs.

Applied **React Context API** for state management.

Collaborated in a team to divide tasks (backend, frontend, database).

Referred to financial apps for inspiration on UI/UX design.

Performed continuous testing using **Postman** and debugging tools.

The overall benefits we gained from the internship

In terms of improving practical skills

Improved ability to design and develop a **full-stack financial web application**.

Hands-on practice in **React.js, Node.js, MongoDB, and Express.js**.

Strengthened skills in **coding, debugging, and system testing**.

Learned how to implement **secure authentication** with JWT.

Gained experience in **data visualization** using charts.

Learned how to generate **financial reports in Excel**.

In terms of upgrading theoretical knowledge

Reinforced knowledge from university courses by applying them in a **real-world project**.

Studied **Agile methodology**, database design, and system analysis in depth.

In terms of improving industrial problem-solving capacity

Learned how to identify and analyze system gaps.

Solved practical problems in authentication, data management, and reporting.

In terms of improving team playing skills

Collaborated in a group using Git/GitHub.

Practiced effective communication, task-sharing, and conflict resolution.

In terms of improving leadership skills

Gained experience in **task allocation, project tracking, and time management.**

Learned how to coordinate small increments for faster delivery.

In terms of understanding work ethics and professionalism

Improved punctuality, responsibility, and accountability in project work.

Followed coding standards and version control discipline.

Maintained teamwork spirit with honesty, trust, and respect.

In terms of improving entrepreneurship skills

Understood how **fintech solutions** like expense trackers can be developed into **marketable products.**

Learned the importance of **innovation, scalability, and customer-focused design.**

In terms of improving interpersonal communication skills

Enhanced ability to communicate ideas clearly with team members.

Improved confidence in presenting project progress.

Developed skills in writing professional documentation and proposals.

In general, the internship at **Digital Equib (DE)** helped us not only learn workplace culture and ICT system development but also guided us in building a **fully responsive Expense Tracker App** with features such as **secure login, income/expense management, dashboards, charts, and report export.** This practical project strengthened our technical and professional growth for future careers in software engineering and financial technology.

Chapter Three

Project Work

Project Title

Expense Tracker (MERN Stack)

Summary of the Project

Purpose

This project is a full-stack **Expense Tracker Application** developed using the **MERN (MongoDB, Express, React, Node.js) stack**. The system is designed to simplify **income and expense management** with secure **user authentication (JWT)**, interactive financial visualizations, and exportable reports.

The application provides a **user-friendly, responsive dashboard** that enables individuals to track their financial transactions, analyze trends using charts, and download reports in Excel format.

Existing System

Currently, most users track their **personal or organizational expenses manually** (notebooks, Excel sheets, or unstructured apps). This method has the following drawbacks:

- Time-consuming and error-prone.

- Difficult to update or generate financial summaries.

- No automatic visualization of income and expenses.

- No real-time synchronization across devices.

- Limited accessibility and lack of data security.

Problems of Existing System

No automation → requires manual updates.

Limited or no graphical representation.

Cannot access data remotely in a secure way.

No easy way to export/share financial reports.

High chance of miscalculations or data loss.

Scope

The **Expense Tracker App** aims to provide an **automated, user-friendly, and secure platform** for tracking financial activities.

The scope includes:

Secure authentication & authorization using JWT.

Centralized storage of data in **MongoDB**.

Charts and Reports for analysis (Bar, Pie, Line charts).

Responsive **web interface** accessible from mobile, tablet, and desktop.

Data export to **Excel** for offline use.

The system focuses on **individuals and small organizations** to manage financial activities effectively.

Objectives

General Objective

To design and implement an **automated financial management system** that tracks income and expenses, provides visual analysis, and supports report generation.

Specific Objectives

Automate tracking of income and expenses.

Provide **visual reports** using charts.

Enable **secure authentication** and personalized dashboards.

Allow users to **add, delete, and export** transactions.

Generate **real-time financial summaries**.

Reduce paperwork and manual reporting.

Ensure **cross-device accessibility** (responsive design).

Proposed System

The proposed **MERN-based Expense Tracker** will:

Provide a **secure login and sign-up system** (JWT).

Display **dashboard summaries** (Balance, Income, Expenses).

Manage **income and expenses** with CRUD operations.

Provide **charts (Pie, Bar, Line)** for visualization.

Show **recent transactions** for quick access.

Allow **Excel report downloads**.

Support **mobile-first responsive UI**.

Enable **real-time updates** and **data persistence** in MongoDB.

Functional Requirements

User Authentication

Sign up, log in, log out (JWT-based).

Profile management.

Dashboard

Display Total Balance, Income, Expenses.

Show recent transactions.

Show visual insights (charts).

Income Management

Add, view, delete income records.

Export income data to Excel.

Expense Management

Add, view, delete expense records.

Export expense data to Excel.

Reports & Analytics

Generate charts (Bar, Pie, Line).

View trends (last 30 days/60 days).

Download reports.

User Experience

Responsive design (mobile, tablet, desktop).

Sidebar navigation.

Non-Functional Requirements

Usability → Simple, intuitive UI.

Security → JWT authentication, data protection.

Availability → 24/7 accessible (cloud-hosted).

Performance → Optimized database queries.

Reliability → Consistent and error-free operation.

Maintainability → Modular codebase with clean APIs.

Portability → Works on all modern browsers & devices.

Software Quality Attributes

Availability – Cloud-deployed, accessible anytime.

Reliability – Ensures accurate transaction storage & retrieval.

Maintainability – Clean MERN architecture for easy updates.

Portability – Responsive UI adapts to devices.

Chapter Four

General Conclusion and Recommendation

Conclusion

During our four-month internship at Digital Equib Financial Technology (DE), I gained extensive practical experience and improved our technical and soft skills significantly. The internship allowed us to apply our theoretical knowledge in real-world projects, especially in software development, database management, and web application design. I learned how to develop a fully responsive Expense Tracker App using the MERN stack, implement user authentication with JWT, track income and expenses, create interactive charts, and generate reports in Excel format.

Moreover, this internship exposed us to professional work ethics, team collaboration, and effective communication in a corporate environment. We developed leadership and problem-solving skills while participating in Agile-based development processes. Overall, the experience was highly valuable in preparing us for future careers in financial technology and software development. It helped bridge the gap between academic knowledge and industry practice and strengthened our confidence in working on complex projects.

Recommendations

Strengths Observed at DE:

DE provides a supportive and structured environment for interns to learn and contribute.

Employees are cooperative, professional, and willing to share knowledge.

The company promotes the use of modern technologies and encourages digital innovation.

DE offers practical training opportunities in software development, database management, and UI/UX design, which enhances interns' technical skills.

Interns are exposed to real-world projects like the Expense Tracker App, allowing hands-on experience and industry-standard workflows.

Weaknesses & Recommendations:

Internet & Infrastructure: Occasionally, internet speed and system performance were slow. **Recommendation:** Enhance IT infrastructure and internet bandwidth for faster access and smoother development experience.

Project Exposure: Some processes were not fully visible to interns, limiting insight into advanced development or operational workflows. **Recommendation:** Provide interns with more access to live project documentation and end-to-end workflows to gain a deeper understanding of company projects.

Mentorship: While support was available, some interns needed more frequent guidance on complex tasks. **Recommendation:** Assign mentors to interns for regular check-ins and guidance to accelerate learning and productivity.

Team Collaboration Tools: Collaboration and version control tools were in use but could be more structured for newcomers. **Recommendation:** Organize brief training sessions on Git/GitHub best practices and Agile workflows for interns.

Overall, the internship at Digital Equub Financial Technology was highly beneficial in developing technical expertise, professional skills, and industry readiness. With minor improvements in infrastructure, mentorship, and project exposure, DE can further enhance the internship experience and continue producing highly skilled future professionals in fintech and software development.
